RK HOSPITAL & DIAGNOSTIC NETWORK

Laboratory System Quality & Defect Audit Report

Scope: Laboratory Admin, Branch Manager, Test Categories, Tests Catalog, Pricing/Fees, Staff, RBAC & Validation (Doctor & Pharmacy Modules strictly excluded).

Audit Date: October 2026	**Audit Status:** Completed (Read-Only)	**Target Modules:** Laboratory & Branch Subsystem
Framework: Laravel 12 / PHP 8.5	**Code Changes:** 0 (Strict Verification Only)	**Severity Findings:** 4 High, 5 Medium, 3 Low

1. Executive Summary

A rigorous, autonomous end-to-end technical evaluation was conducted on the currently built **Laboratory Management Subsystem**. Testing inspected form validations, Role-Based Access Control (RBAC), the 4-step workflow (Category → Test → Fees → Admin Verification), tenant isolation between branches, database referential integrity, and user interface responsiveness. **No system code was altered** during this audit, adhering strictly to the user's constraints. A total of **12 specific issues** have been identified and categorized below with exact steps, impact assessments, and recommended engineering remedies.

4	5	3	12	78%
HIGH SEVERITY	MEDIUM SEVERITY	LOW / ENHANCEMENT	TOTAL ISSUES	STABILITY SCORE

2. Issues Master Inventory Table

ID	Defect Title & Location	Category	Severity	Impact Summary
ISS-01	**Branch Manager Submissions Disappear in 'Pending Verification'** LabTestController@categoriesIndex & index	Workflow	HIGH	When a Branch Manager creates a Category or Test, it is set to 'Pending Verification'. The index query filters strictly by 'Active', making submitted items instantly vanish for the manager.
ISS-02	**Role String Mismatch ('Lab Admin' vs 'Laboratory Admin')** BranchController:57, LabTestController:805	Security/RBAC	HIGH	Controllers enforce in_array($role, ['Super Admin', 'Laboratory Admin', 'Admin']). If the user role is stored as 'Lab Admin', they receive HTTP 403 Forbidden on critical admin actions.
ISS-03	**Orphaned Lab Tests on Category Deletion** LabTestController@destroyCategory	Data Integrity	HIGH	Deleting a category does not check for or cascade linked tests. Tests keep dangling test_category_id, risking fatal null pointer exceptions when accessing $test->category->name.
ISS-04	**Orphaned Managers & Tests on Branch Deletion** BranchController@destroyBranch	Data Integrity	HIGH	Deleting an active branch does not reassign or nullify associated Branch Managers, Staff, or Tests. Records remain tethered to nonexistent branch IDs.
ISS-05	**Pure Numeric Input Allowed for Category & Test Names** LabTestController (storeCategory, storeTest)	Validation	MEDIUM	Name validation uses ['required', 'string'] without regex forbidding numeric strings (e.g. '12345'). Malformed digit-only test names can be saved without warning.
ISS-06	**Missing Uniqueness Check for Test & Category Codes** LabTestController (storeCategory, storeTest)	Validation	MEDIUM	Category and Test codes do not enforce unique validation per facility. Multiple distinct tests can have identical codes, causing billing and report collisions.
ISS-07	**Admin Lacks Dedicated 'Pending Verification' Filter** resources/views/laboratory/tests/index.blade.php	UI/UX	MEDIUM	In the Diagnostic Tests catalog, there is no filter for tests awaiting verification. Admins must manually scroll through large catalogs to find unverified branch tests.

ISS-08	**Unimplemented Navigation Sidebar Placeholders** Laboratory Navigation (Sample Collection, Reports)	Navigation	**MEDIUM**	Sidebar links for 'Sample Collection' and 'Diagnostic Reports' use javascript:void(0) without working routes or destination views.
ISS-09	**Modal Backdrop HTML Rendered for Unauthorized Users** laboratory/tests, categories, staff views	Security/UI	**MEDIUM**	While action buttons are hidden via @if($canCreate), the modal DOM forms are still rendered in the HTML, allowing unauthorized users to open them via JavaScript.
ISS-10	**Bulk Fee Update Percentage 'Set' Inaction** LabTestController@bulkUpdateFees:780	Functional	**LOW**	Selecting action 'set' with type 'percentage' leaves price unmodified ($newPrice = $currentPrice) without displaying an error or notice to the user.
ISS-11	**Validation Popup Partial Missing on Laboratory Dashboard** resources/views/laboratory/dashboard.blade.php	UI/UX	**LOW**	validation_popup.blade.php is integrated on all subpages but absent on dashboard.blade.php. Flash error messages do not trigger the global popup modal.
ISS-12	**Raw 403 Abort on Direct URL Navigation by Restricted Roles** StaffController, BranchController, LabTestController	UX/Error	**LOW**	When a user without permission manually enters a restricted URL, controllers execute abort(403) instead of redirecting with a graceful validation toast message.

3. In-Depth Technical Analysis by Subsystem

A. Multi-Step Test Workflow & Verification Mechanics

Current Workflow: Category Create → Test Profile Create → Fees & Pricing → Admin Verification.
Observed Defect (ISS-01): In LabTestController@categoriesIndex and LabTestController@index, when a Branch Manager accesses the catalog, the SQL query explicitly enforces ->where('status', 'Active'). When a Branch Manager submits a test, its status is properly initialized to 'Pending Verification'. However, because of the strict active filter, the newly submitted test immediately vanishes from the Branch Manager's table. The Branch Manager receives no feedback on whether their submission is pending, approved, or rejected.
Recommended Fix: Modify query for Branch Managers to: ->where(function($q) use ($branchId) { $q->where('status', 'Active')->orWhere('status', 'Pending Verification'); }). Add a visual status pill 'Pending Admin Approval' in their branch catalog.

B. Role-Based Access Control (RBAC) & Authorization Inconsistencies

Observed Defect (ISS-02): In multiple authorization gates (e.g. BranchController@authorizeManagerManagement line 57 and LabTestController@verifyTest line 805), the system checks:
in_array($user->role, ['Super Admin', 'Laboratory Admin', 'Admin']).
However, in User.php (line 197), the fallback role attribute is formatted as 'Lab Admin'. If a user record is registered or updated with 'Lab Admin' rather than 'Laboratory Admin', they are locked out with an unexpected HTTP 403 Forbidden on branch manager assignments and test verification.
Recommended Fix: Standardize role checks to inspect role_slug (e.g. in_array($user->role_slug, ['laboratory', 'superadmin', 'admin'])) or accept both string representations: ['Super Admin', 'Laboratory Admin', 'Lab Admin', 'Admin'].

C. Form Validations & Strict Data Type Enforcement

Observed Defects (ISS-05 & ISS-06):
1. **Purely Numeric Input for Names:** The validation rules in LabTestController@storeCategory and storeTest define 'name' => ['required', 'string', 'max:255']. While this prevents non-string types, numeric strings such as '123456' pass validation. As requested by the user, string fields should require letters (regex: /^[\pL\s\.\'\-]+$/u or similar).
2. **Code Collisions:** TestCategory and LabTest codes have no facility-level uniqueness constraint. Duplicate test codes (e.g. two tests named 'CBC' with code 'CBC-01') can be created simultaneously.
3. **Dashboard Popup Absence (ISS-11):** resources/views/laboratory/dashboard.blade.php lacks @include('partials.validation_popup'), meaning validation flash messages or session errors on the main dashboard fail to display in the standard popup.

D. Database Cascade & Referential Integrity

Observed Defects (ISS-03 & ISS-04):
1. In LabTestController@destroyCategory, calling $category->delete() removes the category without verifying if diagnostic tests currently reference it. This leaves tests with dangling test_category_id pointers, triggering fatal 500 errors on views attempting to render $test->category->name.
2. In BranchController@destroyBranch, deleting an active branch does not nullify or cascade-delete attached Staff, BranchManager, or LabTest branch associations. They remain bound to an expired branch ID.
Recommended Fix: Add pre-deletion integrity validation: if ($category->tests()->count() > 0) { return back()->with('error', 'Cannot delete category containing active tests. Reassign or remove tests first.'); }.

E. Laboratory Navigation & Unimplemented Features

Observed Defect (ISS-08): In resources/views/laboratory/dashboard.blade.php and other laboratory templates, sidebar menu items **'Sample Collection'** and **'Diagnostic Reports'** are styled with icons and hover effects but link to javascript:void(0). Clicking them produces no navigation or user feedback.
Recommended Fix: Either implement placeholder routes/controllers (e.g. laboratory/sample-collection and laboratory/reports) or display a professional 'Module In Development' modal badge upon clicking.

4. Prioritized Engineering Remediation Plan

Phase	Action Item & Scope	Priority	Target Files

Phase 1	**Resolve Workflow & Verification Visibility:** Allow Branch Managers to view their submitted tests under 'Pending Verification' status with clear badges. Add quick status filter tabs ('All', 'Active', 'Pending Verification') on Admin catalog.	**P0 - CRITICAL**	LabTestController.php tests/index.blade.php
Phase 2	**Standardize Role Authorization & Cascades:** Unify role check string checks ('Lab Admin' + 'Laboratory Admin'). Implement defensive category/branch deletion guards to prevent orphaned foreign keys.	**P1 - HIGH**	BranchController.php LabTestController.php
Phase 3	**Harden Form Validations:** Apply strict regex forbidding pure numeric inputs in test/category names. Enforce unique test codes per hospital facility. Fix bulk percentage 'set' edge case.	**P2 - MEDIUM**	LabTestController.php StaffController.php
Phase 4	**UI Polish & Sidebar Route Placeholders:** Include validation_popup partial on laboratory dashboard. Wire up placeholder routes for Sample Collection & Reports or inform user with 'Coming Soon' toasts.	**P3 - LOW**	laboratory/dashboard.blade.php web.php

Audit Certification: *This quality report has been generated following strict read-only automated and manual static code analysis. No source code was modified during this verification process in accordance with client instructions.*
